Mobile phones are an essential tool for your business. However, many senior managers are concerned that escalating mobile phone costs are difficult to control. The CMS mobile phone management service provides a way for companies to take control of mobile phone costs and reduce expenditure by as much as 20%-30%. There is no need to change your carrier, your mobile phone numbers or install expensive software.

Significant Cost Savings. The CMS-Mobile service enables your business to make significant cost savings on your mobile phone costs. Savings come not only from the ability to recover staff personal call costs, but also from improved reporting, management control and workflow efficiency.

- Existing CMS-Mobile clients report that the increased visibility of mobile phone costs and call history within the organisation results in reduced mobile phone spending as users become more conscious of when mobile phone use is appropriate. In addition, managers have the ability to identify and quickly investigate possible misuse of mobile phones.
- Our clients also report that improvements in work processes such as mobile inventory management, cost centre allocation, reporting and bill management produce cost savings. These alone are usually enough to pay for the entire CMS-Mobile service.

Client & Project Billing. For professional service firms such as lawyers, accountants and consultants, CMS-Mobile provides an easy to use facility for identifying call costs via client and project codes. These costs can then be passed on to your own clients.

Personal Use Cost Recovery. CMS-Mobile gives your staff and their managers the ability to know exactly what they are spending on mobile phone calls. The patented Personal Call Cost Recovery process empowers your staff to use their company provided mobile phone in the knowledge that there is a simple, time efficient way to repay personal call costs via payroll deduction or credit card.

Integrated Fixed Line Reporting CMS integrates fixed line and mobile phone billing data in the one system. For more information, enquire about CMS-Fixed.

COSTMEDIA CMS-MOBILE

Simple. Flexible. Outstanding ROI.

CMS-Mobile provides your company with the opportunity to save money on your phone bills, whether you have 50 mobile phones or 5,000+. Our system is simple to implement and flexible to use. We give your users and managers the ability to understand and control mobile phone costs. Best of all, the service is priced to ensure outstanding return on investment.

How Does It Work?

Total e-Business. CMS-Mobile is a complete e-business service. There is no hardware or software for you to install. The implementation process is managed entirely by your Costmedia consultant. Monthly reporting and user interaction is handled via e-mail and on-line through our web site.

Each month we receive electronic billing data direct from your mobile phone carriers. This is matched against an inventory database containing data about your mobile phone users, cost centre structure and so on. Reports are then automatically generated and emailed to all mobile phone users and their managers. In addition, a series of company wide management reports are generated and emailed to your mobile phone fleet administrator.

Simple Call Cost Allocation. Users can then log in to the CMS-Mobile web site and view their detailed billing history. Cost Centre, Divisional and Business Unit Managers can drill down to see the billing history of their team as well. Individual users can quickly identify personal calls and calls that should be charged to clients. The unique *Number Presets* feature enables a user to record frequently used numbers along with a description. *Number Presets* can optionally be used to automatically allocate particular destination numbers to be either Personal or Client related.

Personal Use Options. You can elect to set up User Group Profiles. These determine time zones during which all calls will default to be *Personal Use* for users in that group. For example, you may decide that all calls on weekends be classed as *Personal Use* for your "Sales" User Group. Alternatively you can default all calls to be either *Business Use* or *Personal Use*. Users can of course re-allocate calls to be Client related, Business Use or Personal Use at any time.

Cost Recovery. At the end of each billing period, data files are generated ready to load into your G/L, Payroll and Client Billing systems. These contain cost centre allocations, payroll deductions for personal use costs, and client billable data.
